

PHITS Y10A - Assembly instructions

1. Remove all screws and remove the top cover and the front of the speaker.
2. Handle the cables with caution.
3. Place the BK plate in such a way that it fits snugly in the back.
4. Place the plate B taking care that the holes coincide with the nuts of the base and pressing the BK plate backwards.

5. Reassemble the front panel and place the plates L and R. They must fit between the agglomerated foam of plate B and plate BK.
6. Place the gray Basotect foam in the center, taking care not to strain the speaker wires.
7. Place the plate T.
8. Replace the top cover taking care that the plates remain in place. Reposition all screws starting with the top ones, leaving the tightening to the end, when all the screws are in place. You must do this by pressing the cover tightly, thus ensuring the tightness between the plates.

Brand your SP-2000 and enjoy the new sound!
